oluntary Results Feedback Form	
> I am an examiner in Workgroup:	Example: 1610
> Relevant prior art found, search results used	as follows:
☐ 102 rejection	
☐ 103 rejection	
Cited as being of interest.	
☐ Helped examiner better understa	and the invention.
☐ Helped examiner better understa	and the state of the art in their technology.
Types of relevant prior art found:	
☐ Foreign Patent(s)	
Non-Patent Literature (journal articles, conference proceed	lings, new product announcements etc.)
> Relevant prior art not found:	
Results verified the lack of relevant prio	r art (helped determine patentability).
☐ Results were not useful in determining p	patentability or understanding the invention.
Comments:	

Drop off or sand completed forms to STIC/Biotech-Cham Library Ramson Bldg.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NAME/KEY: misc feature
                                                                                                                                                                                       Sequence 1, Application US/08916421B

Patent No. 6503729
GENERAL INFORMATION:
APPLICANT: Bult et al.
TITLE OF INVENTION: Complete Genome Sequence of the Methanogenic Archaeon, Methanococ Patent No. 6503729
TITLE OF INVENTION: jannaschii
FILE REPERENCE: PB275
CURRENT APPLICATION NUMBER: US/08/916,421B
CURRENT FILING DATE: 1997-08-22
PRIOR APPLICATION NUMBER: US 60/024,428
PRIOR APPLICATION NUMBER: US 60/024,428
PRIOR APPLICATION NUMBER: US 60/024,428
PRIOR PILING DATE: 1996-08-22
NUMBER OF SEQ ID NOS: 3
SOFTWARE: Patentin version 3.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      FEATURE:
                                                                                                                                                                                                                                                                                     FEATURE:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 1, Application US/09692570

Patent No. 6797466
GENERAL INFORMATION:
TITLE OF INVENTION: Complete Genome Sequence of the Methanogenic Archaeon, Methanococ Patent No. 67997466
TITLE OF INVENTION: jannaschii
FILE REFERENCE: PARTSC1
CURRENT APPLICATION NUMBER: US/09/692,570
CURRENT FILING DATE: 2003-01-14
PRIOR FILING DATE: 1996-08-22
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      149527 GACAAATCCTCAAATAGAGGCAGAATATATTTCCCAAAATACTGGAATAGAGGTTATTCC 149468

Patent No. US20020107368A1

GENERAL INFORMATION:

APPLICANT: Tian, Jing-Hui

APPLICANT: Walker, Richard I.

APPLICANT: Walker, Richard I.

APPLICANT: Jackson, W. James

TITLE OF INVENTION: Helicobacter proteins, gene sequences and uses;

TITLE OF INVENTION: Helicobacter proteins, gene sequences and uses;

TITLE OF INVENTION: Helicobacter proteins, gene sequences and uses;

FILE REFERENCE: 7969-088

CURRENT FILING DATE: 2000-12-07

NUMBER OF SEQ ID NOS: 44

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 36

#### November 2005

Published\_Applications Nucleic Acid and Published\_Applications Amino Acid database searches now generate two sets of results each. The Published\_Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published Applications New databases; older published applications make up the Published Applications Main databases.

Searches run against Nucleic Acid Published Applications produce two sets of results, with the extensions rupbm (Published Applications NA Main) and .rnpbm (Published Applications NA New).

Searches run against Amino Acid Published Applications produce two sets of results, with the extensions rapbm (Published Applications AA Main) and .rapbn (Published Applications AA New).

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Description

Pending Nucleic Acid and Pending Amino Acid database searches generate two sets of results each. The Pending databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Searches run against the Nucleic Acid Pending database produce two sets of results, with the extensions .rnpm and .rnpn

Searches run against the Amino Acid Pending database produce two sets of results, with the extensions .rapm and .rapn

Because they contain data that is confidential, the results of Pending database searches should not be left in the case .
